

JAPAN INFORMATION ACCESS PROJECT

The Japan Information Access Project is a nonprofit 501(c)(3) membership organization to strengthen international understanding of Japanese information in science, technology, management, and business.

The Japan Information Access Project's goal is to teach professionals how to access, use, and evaluate Japanese information for research and planning.

Founded in 1991, the Japan Information Access Project carries forward its objective by:

- Organizing meetings that bring together experts and policymakers on Japanese and Western science, technology, industry, management, and trade issues.
- Focusing its research on critical and emerging issues that affect the economic and scientific relationship between Japan and the West. Research areas include: semiconductors, electronics, multimedia, biomedical technologies, chemicals and materials, aerospace, telecommunications, financial services, manufacturing, development, and trade and technology policies.
- Publishing directories, newsletters (*Japan Access Alert Bulletin* and *Tracking Japan: A Washington Report on Trade, Technology & Japan*), translations, and a series of regular reports specifically designed to enable non-Japanese speakers to find, research, and understand essential Japanese S&T issues.

The Japan Information Access Project is funded by its membership dues, the University of New Mexico, and American foundations. The Project neither solicits nor receives funding from Japanese organizations.

COMMENTS

We are not perfect and we welcome all your suggestions and comments on how we can improve this guide to Japan's patent system. Please fax this page to the Japan Information Access Project or telephone us with your observations.
